Portfolio

n4ykh0.github.io/portfolio

Interactive designer with a strong interest in game development, multimedia and interactive project creation, and illustration. Experience gathering information to improve interaction and user experience, software development in Unity, AI-driven process automation, concept art, cut-out animation, and audio/video editing.

Experience

AI Automation Developer (2026 – Present)

Felo Fullstack

- Designed and built an AI-driven content automation system (N8N): blog and social media post generation, control panel, scheduled publishing.
- Three-block architecture with error handling and data flow between nodes.

Audiovisual Analyst (Feb – Oct 2025)

Educación ColomboJaponesa S.A.S

- Created audiovisual content for social media focused on Japanese culture and language education, applying UX techniques.
- Developed and proposed metaverse spaces for distributing educational content.

AR Project: Magic Mirror (2025)

Felo Fullstack

- Built an augmented reality project integrating 3D digital objects into real space.
- Programmed and implemented camera-based interaction logic using Unity and Python.

Notable Achievements

Hackathon: Safety in the Universities of Downtown Bogotá (2024)

Corporación Universidades del Centro de Bogotá

- Designed an augmented reality solution to improve safety perception in downtown Bogotá, gamifying real risks in the area and how to prevent them. **2nd place.**

Education

Video Game Design and Interactive Content

Universidad Jorge Tadeo Lozano
(2018 - 2025)
